

 MULTI-AGENT FRAMEWORK

AgentScope AI Resume Intelligence

An automated multi-agent AI pipeline designed to parse, analyze, match, and evaluate candidate resumes against complex job requisitions in real time.

 Architecture: AgentScope 2.0  Engine: Multi-LLM Orchestrator  Enterprise Production Ready

🎯 Problem & Core Solution

⚠️ Traditional Recruitment Flaws

- ✗ **Keyword Over-Reliance:** Traditional ATS misses qualified candidates due to exact string matching limitations.
- ✗ **High Unconscious Bias:** Human screening leads to inconsistent scoring across candidate pools.
- ✗ **Scalability Bottlenecks:** Manual review of thousands of resumes consumes weeks of recruiter time.

✅ AgentScope AI Advantage

- ✓ **Semantic Skill Mapping:** Evaluates experience relevance rather than just syntax matches.
- ✓ **Objective Multi-Agent Consensus:** Independent agents cross-verify candidate scores.
- ✓ **Instant Execution:** Processes and ranks hundreds of applications per minute.

Multi-Agent Orchestration Engine

Built on the **AgentScope Framework**, our architecture decouples intelligence, execution, and memory into specialized collaborative agents:

-  **Parsing Agent:** Extracts structured JSON from raw PDF/Docx resumes.
-  **Match Analyzer:** Evaluates domain experience against job descriptions.
-  **Judge Agent (OpenJudge):** Eliminates hallucinations and validates final candidate ranks.

Core Intelligence Modules

Deep Parsing

Identifies implicitly stated skill sets, candidate career velocity, leadership signals, and technical capabilities with 98% accuracy.

Match Analytics

Generates multi-dimensional alignment scores across technical depth, culture fit, experience level, and soft skills.

ReMe Persistent Memory

Retains talent pool history across hiring cycles to suggest candidate re-engagement for new requisitions.

Real-time Recruiter Dashboard

Actionable Talent Insights

The interactive dashboard transforms complex multi-agent outputs into easy-to-digest hiring insights for talent acquisition teams:

-  **Instant Match Score:** 0-100% breakdown with contextual explanations.
-  **Gap Analysis:** Highlights missing critical skills or certifications.
-  **Automated Interview Prompts:** Generates tailored questions based on candidate weaknesses.

End-to-End Analysis Workflow

Proven Performance Impact

85%

Time-to-Shortlist Cut

Reduces initial candidate evaluation from days down to minutes.

3.2x

Quality of Hire Gain

Significantly increases candidate match retention after 90 days.

0%

Keyword Gaming

Immune to candidate keyword stuffing via deep context reasoning.

Accuracy Benchmark Comparison

AgentScope Multi-Agent

96% Accuracy

Single-Prompt LLM

72% Accuracy

Legacy Keyword ATS

48% Accuracy

Manual Human Review

65% Consistency

* Accuracy measured against ground-truth hiring panel selections across 5,000+ tech & business engineering profiles.

Feature Comparison Matrix

Capability Feature	Legacy ATS	Basic AI Wrapper	AgentScope AI System
Understanding Context & Acronyms	✗ Exact Match Only	— Moderate	✓ Deep Context Aware
Hallucination Control	N/A	✗ Unchecked	✓ OpenJudge Verified
Long-Term Talent Memory	✗ Static Records	✗ None	✓ ReMe Memory Layers
Explainable Match Rationale	✗ No Explanation	— Basic Text Summary	✓ Step-by-Step Scoring Audit
